## Summary

Frontend-first full-stack engineer with 7 years building React and TypeScript products. At Standard Metrics, I lead frontend platform work and ship data-heavy features for investment firms. I also build multi-agent AI tooling with Claude Code, including orchestration, evals, and model tiering.

## Experience

### Standard Metrics

Software Engineer · Mar 2022 – Present

- Led a frontend platform re-architecture across a 15-engineer team. Design system share of new UI code rose from 22% to 84%.
- Led the KPI cadence project so firms can request each KPI at its own cadence in one Information Request. One firm had needed 84 separate requests, and about half of customers now adjust cadences.
- Built spreadsheet-grade keyboard navigation, in-cell editing and Excel paste for the metrics grid. The beta reached 35 users across 11 firms before launch.
- Led auto-submit from proposal to release ahead of reporting season. 20 portfolio companies adopted it in week one.
- Presented my AI development workflow to the engineering team. Teammates adopted parts of it, and I contributed skills to the team's shared skills marketplace.

### InsideOut Development

Software Developer · Apr 2019 – Mar 2022

- Led front-end render performance work. Largest contentful paint dropped from 5.2s to 2.0s, and Lighthouse score rose from 47 to 82.
- Cut marketing tech spend by 25% by moving from SlideShare, HubSpot and UberFlip to a Strapi and Pardot stack.

### Bryan University

Adjunct Instructor · Jun 2020 – Jun 2023

- Taught hundreds of students full-stack development with React, REST APIs and Python, with recorded video feedback on assignments.

## Projects

### AI Development Toolkit

Creator · Nov 2025 – Present · github.com/Eric-Lingren/claude-code-toolkit

- Built a multi-agent Claude Code pipeline that takes work from planning interview to reviewed PR, with test-first build agents and separate test and browser verification agents.
- Tiered models by cost of error. Haiku runs lookups and tests, Sonnet builds and reviews, Opus handles planning and debugging.
- Built LLM evals with multi-judge scoring, plus a learning loop that turns review misses into measured fixes to the skills that caused them. Used the pipeline to build ericlingren.com end to end.

## Skills

**Frontend:** React, TypeScript, JavaScript, Next.js, HTML, CSS, Storybook, shadcn/ui, design systems, accessibility (a11y)
**Backend:** Node.js, Python, Django, PostgreSQL, REST APIs
**AI:** Claude Code, Anthropic API/SDK, multi-agent orchestration, LLM evals, LLM-as-judge, MCP, prompt engineering
**Testing and tooling:** Vitest, Jest, Playwright, Biome, ts-morph codemods, Git, CI/CD, AWS, Cloudflare

## Education

V School · Full Stack Web Development · 2018
IBM · Data Science Professional Certificate · 2022
Cisco · CCENT · 2018
