SUMMARY

Frontend-first full-stack engineer at Standard Metrics, the platform investors and portfolio companies use to share financial and operating data. I own features from the data model through the API to the screen, and I led a frontend platform migration that gave a large React codebase a single component tree. [ERIC: confirm or replace this summary]

EXPERIENCE

Software Engineer, Standard Metrics Mar 2022 to present

- Led KPI granularity for Information Requests, so a firm can ask each portfolio company for each KPI at its own cadence inside one request.
- Rebuilt the investor report page, then added the auto-submit toggle; twenty portfolio companies switched to it in its first week.
- Led the seven-step frontend migration that folded three competing UI folders into one component tree with lint-enforced boundaries, and moved the test suite from Jest to Vitest.
- Built a shared set of Claude Code skills and agents that carry a task from idea to merged PR. [ERIC: add a before/after figure only if you can source it]

Software Developer, InsideOut Development Apr 2019 to Mar 2022

- Cut render time on [ERIC: what was slow, with before and after numbers].
- [ERIC: one more client project outcome, from the LinkedIn export]

Adjunct Instructor, Bryan University Jun 2020 to Jun 2023

- [ERIC: one line on what you taught, from the LinkedIn export]

MERN Instructor/TA, V School Jan to Apr 2019

- [ERIC: one line on what you taught, from the LinkedIn export]

SKILLS

Frontend: React, TypeScript, JavaScript, Next.js, HTML, CSS and Sass, Vitest and Jest, Storybook
Backend: Node.js, GraphQL, Express, MongoDB, MySQL, Python
Tooling: Claude Code, ESLint, Git, AWS [ERIC: confirm skills list against the 2022 resume]

EDUCATION

[ERIC: education and certifications, from the LinkedIn export and 2022 resume]
