Summary

Frontend-first full-stack engineer with 7 years building React and TypeScript products. At Standard Metrics, I own frontend platform work on a 25-engineer team and ship data-heavy features for investment firms. I also build multi-agent AI tooling with Claude Code, including orchestration, evals, and model tiering.

Experience

Standard Metrics

Software Engineer · Mar 2022 – Present

- Led a re-architecture of our frontend platform for the team. Design system share of new UI code rose from 22% to 84%.
- Owned Reporting Granularity project end to end, so firms can request each KPI at its own cadence. One firm had needed 84 separate requests, and about half of customers now adjust cadences.
- Built spreadsheet-grade keyboard navigation, shortcuts, in-cell editing and copy/paste for our metrics grid. The beta reached 35 users across 11 firms before launch.
- Took auto-submit from proposal to release ahead of reporting season. 20 portfolio companies adopted it in week one.
- Built an AI development workflow and shared with teammates, who adopted pieces. Added to our team's skills marketplace.

InsideOut Development

Software Developer · Apr 2019 – Mar 2022

- Owned front-end performance for our website. Largest contentful paint dropped from 5.2s to 2.0s, and Lighthouse score rose from 47 to 82.
- Cut marketing tech spend by 25% by moving from SlideShare, HubSpot and UberFlip to Strapi and Pardot.

Bryan University

Adjunct Instructor · Jun 2020 – Jun 2023

- Taught hundreds of students full-stack development with React, REST APIs and Python, with video feedback on assignments.
- Helped shape the course curriculum, giving feedback and design input across iterations.

Projects

AI Development Toolkit

Nov 2025 – Present · github.com/Eric-Lingren/claude-code-toolkit

- Built a multi-agent Claude Code pipeline that takes work from planning interview to reviewed PR, with test-first build agents and separate test and browser verification agents.
- Tiered models by cost of error. Haiku runs lookups and tests, Sonnet builds and reviews, Opus handles planning and debugging.
- Built LLM evals with multi-judge scoring and learning loops that turns misses into measured fixes for the skills that caused them.

Skills

Frontend: React, TypeScript, JavaScript, Next.js, HTML, CSS, Storybook, shadcn/ui, design systems, accessibility (a11y)
Backend: Node.js, Python, Django, PostgreSQL, REST APIs
AI: Claude Code, Anthropic API/SDK, Codex, Amp, multi-agent orchestration, LLM evals, LLM-as-judge, MCP, prompt engineering
Testing and tooling: Vitest, Jest, Playwright, Biome, ts-morph codemods, Git, CI/CD, AWS, Cloudflare

Education

V School · Full Stack Web Development · 2018
IBM · Data Science Professional Certificate · 2022
Cisco · CCENT · 2018
